Work Experience

Rooster Grin Media - Full-Stack Developer   San Francisco, CA
                                                                    2019-present

Created HIPAA compliant patient portal for scheduling appointments and updating confidential patient information with React and Ruby on Rails. Designed flexible RESTful APIs for ease of use and scalability.

Started internal mentorship program for working with junior developers, pair programming to build new features while providing experience and feedback.

Rooster Grin Media - Front-End Developer   San Francisco, CA
                                                                    2017-2019

Collaborated with a product team to create cross-browser, mobile-first marketing websites. Standardized conventions, tools and internal developement processes. Created easily reusable components and styles applying BEM methodology with Sass mixins and extensions.

Assisted in interviewing to double team size, as well as training new engineering hires. Worked with product and design to improve project management workflows.

Narvar Inc. - Implementation Engineer - Contractor   San Francisco, CA
                                                                                    2017

Contracted to resolve a backlog of projects including product launches and outstanding page edits. Worked jointly with the Customer Success team to create the landing pages our clients had envisioned.

Onstad's Insurance Agency - Front-End Developer   San Ramon, CA
                                                                            2016-2017

Created an authenticated intranet for remote employees. Built with PugJS, PassportJS and MongoDB for authentications, styled with Boostrap, served by an ExpressJS server.
